

# Beating and Freeness

*Determine the work done on fiber during beating as measured by the Schopper-Riegler (SR) number.*

## INTRODUCTION

The "Schopper Riegler" Beating and Freeness Tester is designed to determine the rate of drainage of a dilute pulp suspension and express it in terms of the Schopper-Riegler (SR) value. The SR value is the inverse of the volume of water collected divided by 10. The rate of drainage is related to the work done on the fibre during beating and refining.
